

# REMEDIATION IS NOT A DIRTY WORD

*Use DURA-BASE® to  
Provide Swift, Safe,  
All-weather Access  
to Tough Projects.*

Site remediation and environmental clean up requires careful handling and isolation of material no matter what the weather or conditions are. With a DURA-BASE® temporary road or work pad, you gain all weather access to your location, making operations safer, cleaner and more efficient. The thermoplastic construction of each mat insures strength, uniformity, extremely long service life and the ability to be cleaned and decontaminated for multiple applications.

Whether it's a sensitive location or an operational waste facility, DURA-BASE® can provide an ideal temporary road surface, work pad or material isolation area. Vehicles won't bog down or rut the soil because DURA-BASE® distributes the weight of extreme loads over a large surface area. The mats help keep your job site clean and reduce the amount of mud tracked onto public roadways. Contractors, project owners and customers alike can be confident in DURA-BASE's ability to help maintain a reputation of safety and quality to the public.

DURA-BASE® is designed with special safety features that help protect personnel, equipment and the environment from damage. Anti-static and UV-inhibitors extend the life and utility of the mats. The non-skid tread pattern enables tracked or wheeled vehicles to stop, turn and maneuver with ease. Twist-lock fasteners interconnect the mats to bring stability, convenience and versatility to the matted area with a variety of connection points for multiple mat configurations.

Expert site evaluation and technical support is available.
