

DISASTER RELIEF EFFORT, ARKANSAS

# INCREASE MOBILITY FOR EMERGENCY AND DISASTER RESPONDERS

*Engineered for Safety,  
Durability and Rapid  
Installation.*

A DURA-BASE® temporary road can save critical time when disaster strikes and flooding or debris has made roadways impassable. Designed for harsh conditions and extreme environments, the DURA-BASE® Advanced-Composite Mat System provides access for vehicles and equipment when nothing else can get through. Put DURA-BASE® in your infrastructure plan to have a ready solution for roadway washout, mud slides, overland detours and emergency access to isolated locations.

Temporary shelters can be installed on top of a DURA-BASE® pad to keep you out of the mud and on a solid surface. DURA-BASE® locks together with easy-to-use twist-lock fasteners to create a variety of pad configurations or roadway designs. The mats are made from a durable thermoplastic insuring strength and uniformity, as well as an extremely long service life. Once the mats are laid in place and locked together, they form a sturdy, continuous network that distributes the weight of passing vehicles or resting loads across an extensive surface.

The use of two crewmembers and a forked-equipped loader make installation and removal simple. In extreme environments, where equipment cannot touch the ground surface at all, the mats can be installed one in front of the other while driving over previously laid mats.

DURA-BASE® was designed with special safety features that help protect personnel, equipment and the environment from damage. Anti-static and UV inhibitors extend the life and utility of the mats. The non-skid tread pattern enables tracked or wheeled vehicles to stop, turn and maneuver with ease.

Expert site evaluation and technical support is available.
