

A POWERFUL ASSET TO THE UTILITY INDUSTRY

***All-Weather Access.
Rapid Installation.
Environmentally Safe.***

DURA-BASE® provides all-weather all-season access roads and work sites for the power and utility industry. Whether you're replacing a transformer, upgrading a power line or erecting a tower, the DURA-BASE® Advanced-Composite Mat System is the economical solution for your access needs. It's environmentally friendly, cost effective and can be utilized with all equipment whether steel-track or rubber tire equipped.

With a rapidly installed DURA-BASE® road, any vehicle from crane to crew truck can gain vital access to your work site when extreme conditions like tornadoes, hurricanes or flash floods make transmission lines nearly inaccessible to conventional equipment. The ideal solution for soft or shifting soils and inadequate sub-grades, DURA-BASE® distributes the weight of extreme loads over an extensive surface area and keeps your equipment out of the mud.

Safety is always a priority for our clients, so DURA-BASE® is designed to protect personnel, equipment and ground surfaces from damage. The engineered surface is a uniform base upon which to travel or operate. The non-skid tread pattern enables tracked or wheeled vehicles to stop, turn and maneuver with ease. Twist-lock fasteners bring stability, convenience and versatility to the matted area with multiple connectors and a variety of configuration patterns.

Get in and get the job done with DURA-BASE®.

Expert site evaluation and technical support is available.
